transkonn

Built for a perfect overview.

Simplified & scalable installation

Compute-heavy hardware and software are 'in the cloud', only a on-site bridge appliance to connect the cameras to the cloud-based VMS- configuration,support and management are fulfilled remotely by us.
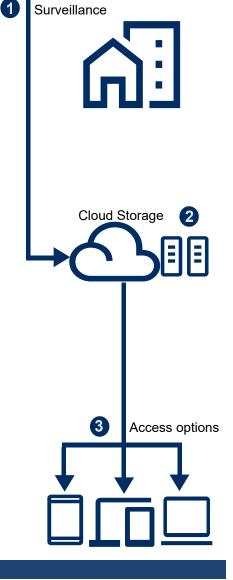

Remote management

Automatic technology updates are sent through the internet to your on-site appliance. Your system is continuously evolving for new innovations, and has longevity as they are minimal hardware limitations. Video retention periods are flexible to meet storage needs.

Improved accessibility

Cloud-based systems are built for remote access. Acess to the camera images and camera management requires a user ID. You simply log on to Transkonn's portal, accessible from desktop, mobile and tablet devices.
